

Intro of React.

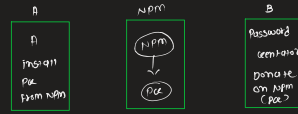

Why we? it's work on Reconciliation in React. No need Reload Hole Page. it's provide many functionality and good ecosystem.

Reconciliation in React.

Installation

we can install code Here

→ find to use this npm we need node.

→ now React also provide by npm so that we can find on npm. (lib)

→ now to install React boiler plate we need of vite like

→ when we use of React then we need to install large amount of code we have to write by our hand and again this process is time taking to solve this made vite and this we can install boiler plate of React.

→ if we use of Raw React then full code use we have to write with our hand. to save this time vite helps you that's why we use of vite.

→ And also vite comes from node so that we need to install node.
