

→ mongo DB

Create an account

↳ meethirparva@

Network Access

↳ then Add IP

↳ Add IP Access List entry

↳ 0.0.0.0

Download

↳ mongo DB compase

↳ ⑦ create connection

URL

↳ At+pass

↳ cluster

↳ connect

↳ I have installed

security

↳ data base Access

↳ user

↳ edit Password → create generate

↳ copy

<db-Password>

→ now After write js code we have to connect express server or mongo DB data base.
for that first of all we need to install

npm i mongoose ← for connect and many, more.

now Define this function in server.js and call and Rem.

name

→ now create src folder

↳ db folder

↳ db.js

Redeire

↳ mongoose

Function connect

String/ cohort

And export

it's want string of DB

Compass

Copy connection string

npm init -y

npm i express

npm i mongoose ← to connect with
data base

npm nodemon server.js

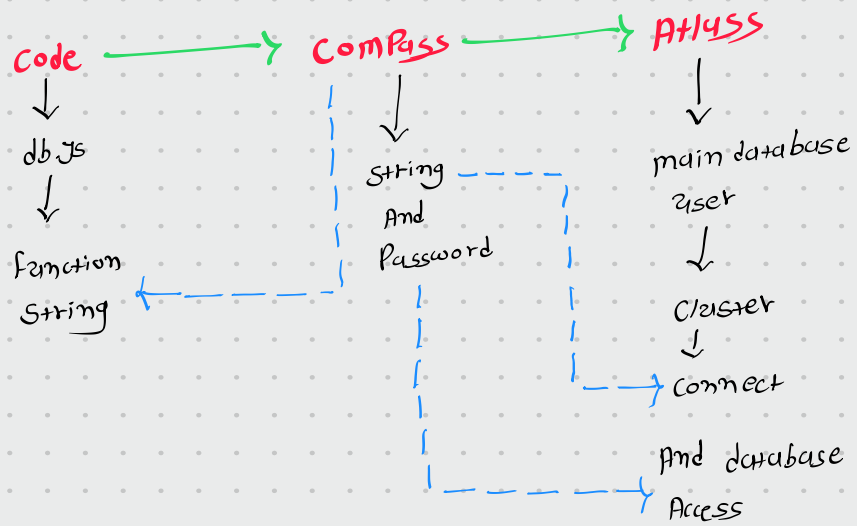

model. export = connectToDB;

Server.js

```
{ const // = require();
```

call the function

```
{ connectToDB();
```

→ now DB mainly do four operation

↳ Create
Read
Update
Delete

→ now group of similar type of data it's called a collection.

→ model :- models makes easy to perform crud operations.

without model we can also do crud operation but it's difficult. you have to write many code by hand.

→ Schema (Blueprint)

which data you store in database in future, and they how looks like that describe this Schema. (which type of data you store in data base.)

↓ this Schema we create different folder.

src

↳ models

↳ note.model.js

↳ data name

create an model named notes and export it.

→ And all set now you can perform crud operation on server.js
